**Automate
the Hardest
Parts of IT**

ninjaone.com

NinjaOne Automated Endpoint Management Platform

Automate all your critical endpoint management workflows for unparalleled efficiency, security, and support.

Rated No. 1 on G2 Crowd, our customers love how they can save time and drastically reduce costs. You'll gain deep visibility into your endpoints and advanced automation for device provisioning, patching, and endpoint management.

Our additional solutions expand capabilities with mobile device management (MDM), remote support, additional security layers, data backup, activity ticketing, and internal documentation.

Finally, NinjaOne integrates with a variety of third-party solutions to seamlessly include tools you might already have in your technology stack, or perhaps plan to add at some point in the future.

NinjaOne Endpoint Management

NinjaOne Endpoint Management simplifies common IT workflows by consolidating all functionality into a single, information-rich, and easy-to-navigate interface. And because NinjaOne is cloud-native, your IT team will find management of endpoints to be the same, familiar experience - regardless of device location or type.

Full visibility

Technicians can quickly check on the health of the entire organization, specific departments/office locations, or individual devices.

Complete activity logging

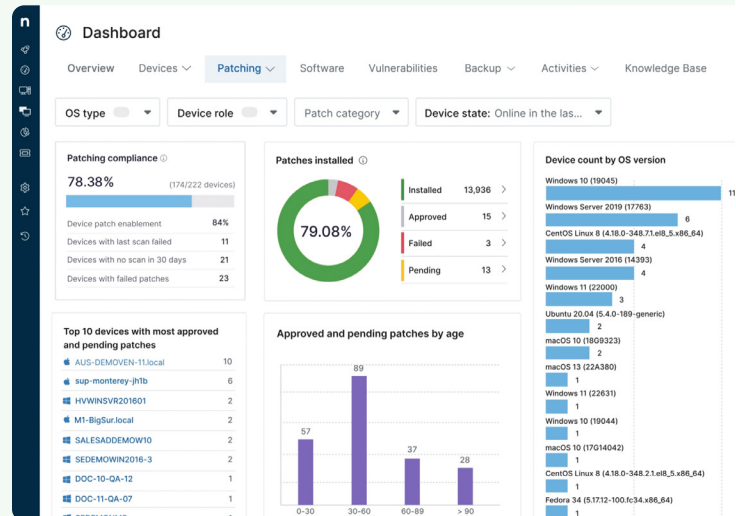

NinjaOne logs every activity taken on every device to provide not only a full history of its management, but the audit data your team may need to prove compliance.

Fast, intuitive interface

Jump from organization to device details, policy-setting to patch scheduling in single clicks with fast-loading pages. It's so easy, our customers report that onboarding a new technician typically takes under three hours.

Manage any device

We enable your team to manage any device – Windows, Mac, Linux, laptop, server, networking device, virtual machine or mobile device – so even the most diverse mix of endpoints remains well within their control.

Mobile device management

Manage, secure, and support personal or company-owned Android and Apple mobile devices. Efficiently manage all your endpoints – from smartphones to servers, VMs to networking devices – within a single console to reduce complexity and cost.

Powerful automation

Dramatically reduce the time it takes to perform patching, backup, and virtually any repetitious task via device management policies. Use scripts from the built-in library or create your own to run more complex workflows.

Patch and secure endpoints

NinjaOne removes patching complexity to mitigate risk for your organization. Automatically identify and remediate endpoint vulnerabilities across all platforms, domains, and locations at speed and scale from a single pane of glass – no infrastructure required. Patch endpoints 90% faster with zero-touch patch identification, approval, and deployment.

Relentless Innovation

Easy to use, easy to do business with

Committed to your success

Rated #1 in support and customer satisfaction, we are obsessed with releasing stable solutions, minimizing response times, and ensuring our customers are 100% satisfied with each and every NinjaOne interaction.

Simplify security. Ensure compliance.

Leverage deep visibility into endpoints, as well as actionable insights. Simplify patching to make it less time-consuming and more consistent. Harden endpoints to minimize the attack surface. Initiate and manage cloud-based backups from the same NinjaOne console.

Easy to implement, learn, and use

NinjaOne Endpoint Management requires no additional infrastructure, and full onboarding can typically be completed in under one month. Plus, the NinjaOne UI is super-fast and easy to learn. Most technicians can become productive on NinjaOne in just a few hours.

Everything in one place

Our single-pane-of-glass solution puts all the data and tools your team needs to monitor and manage your IT infrastructure in one place, and reduces tool sprawl.

Powerful and flexible

Within a single-pane-of-glass, NinjaOne provides endpoint management, mobile device management, patch management, security, remote control, helpdesk, ticketing, documentation and backup. Plus, NinjaOne's unique hierarchical policy management system standardizes how devices are managed to save additional time and effort.

Streamline service workflows

NinjaOne gives your technicians all the information and context they need to proactively identify incidents, remediate issues remotely, and respond to support requests in the same centralized workflow for faster, more effective support.

NinjaOne automates the hardest parts of IT, empowering 20,000+ IT teams with visibility, security, and control over all endpoints.

“Network administrators can make managing hundreds if not thousands of machines an achievable task. It’s fast, it’s simple, and it just works.”

Jarom West,
Director of Operations, Suretec

“NinjaOne allows me to have an extremely lean IT support team. Common industry average is roughly 70 employees to one IT staff. I’m at 252.”

Ken Taylor,
CTO, Resicap
